

Monitor and take control of document usage
on your imageRUNNER ADVANCE device

iW Accounting Manager for MEAP

Every organization can perform more efficiently if they know how their print resources are actually used. Lack of accountability and monitoring could eventually lead to organizations paying heavy, 'unknown' costs and even risk paper shortage at critical times.

The iW Accounting Manager for MEAP is created specifically for this purpose: to help track your organization's print and paper usage through detailed and vital information of how your multifunction devices are actually used.

It is an essential software that furnishes you with cost-monitoring information and detailed reports. In addition, users are also reminded of their current resource usage at the multifunction device. This multi-pronged approach provides you with simple, yet efficient administration that eliminates excessive usage and costs.

Key Features

Designed for MEAP

The iW Accounting Manager for MEAP integrates perfectly with your imageRUNNER or imageRUNNER ADVANCE device, offering you excellent monitoring capabilities without need for extra manpower or equipment.

Easy-to-Use

The software lets you access from any browser, allows you to register multiple MEAP devices, and automatically generates reports based on your requirements. You can even schedule when these reports are generated, and where they are sent to.

User Visual Feedback

You can specify a message, as well as the users' usage record (both individual and departmental usage) to be shown on the touch panel when they log in at the multifunctional device. This helps remind them of their usage and encourages them to reduce wastage such as excessive color printing or paper usage.

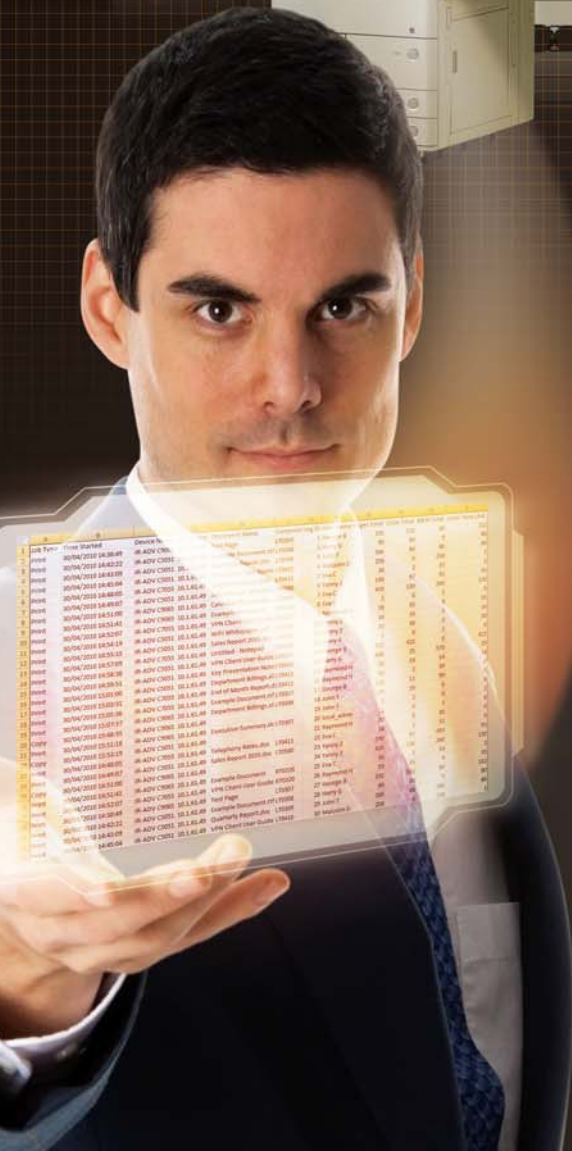

Comprehensive Report Creation

Detailed data such as paper count, paper size, color usage and more can be easily generated, and translated into useful information sorted by department ID, user, or function. With the iW Accounting Manager for MEAP, you can collect total, summarized results from many MEAP devices simultaneously.

This provides you with insights for better decision-making, easier chargeback and greater accountability. The reports are also formatted in Comma Separated Value (CSV) format for easier export.

The iW Accounting Manager for MEAP is the perfect complement for your imageRUNNER and imageRUNNER ADVANCE devices. For a simple, yet highly efficient resource monitoring solution, contact your Canon sales representative today.
